United States Patent and Trademark Office (USPTO)Office Action (Official Letter) About Applicant's Trademark Application

U.S. Application Serial No. 97733259

Mark: GPT

Correspondence Address:

Steven M. Espenshade
PIRKEY BARBER PLLC
1801 EAST 6TH STREET
SUITE 300
AUSTIN TX 78702 UNITED STATES

Applicant: OPENAI OPCO, LLC

Reference/Docket No. OPAI013US

Correspondence Email Address: tmcentral@pirkeybarber.com

NONFINAL OFFICE ACTION

Response deadline. File a response to this nonfinal Office action within three months of the "Issue date" below to avoid <u>abandonment</u> of the application. Review the Office action and respond using one of the links to the appropriate electronic forms in the "How to respond" section below.

Request an extension. For a fee, applicant may request one three-month extension of the response

deadline prior to filing a response. The request must be filed within three months of the "Issue date" below. If the extension request is granted, the USPTO must receive applicant's response to this letter within six months of the "Issue date" to avoid abandonment of the application.

Issue date: May 25, 2023

The referenced application has been reviewed by the assigned trademark examining attorney. Applicant must respond timely and completely to the issues below. 15 U.S.C. §1062(b); 37 C.F.R. §§2.62(a), 2.65(a); TMEP §§711, 718.03.

SEARCH OF USPTO DATABASE OF MARKS

The trademark examining attorney has searched the USPTO database of registered and pending marks and has found no conflicting marks that would bar registration under Trademark Act Section 2(d). 15 U.S.C. §1052(d); TMEP §704.02.

SUMMARY OF ISSUES:

- Section 2(e)(1) Refusal—Merely Descriptive
- Advisory: Supplemental Register
- Specimen Not Acceptable—Partial Refusal as to Class 09

SECTION 2(e)(1) REFUSAL—MERELY DESCRIPTIVE

Registration is refused because the applied-for mark merely describes a feature, function, or characteristic of applicant's goods and services. Trademark Act Section 2(e)(1), 15 U.S.C. §1052(e)(1); see TMEP §§1209.01(b), 1209.03 et seq.

An abbreviation, initialism, or acronym is merely descriptive when it is generally understood as "substantially synonymous" with the descriptive words it represents. *See In re Thomas Nelson, Inc.*, 97 USPQ2d 1712, 1715 (TTAB 2011) (citing *Modern Optics, Inc. v. Univis Lens Co.*, 234 F.2d 504, 506, 110 USPQ 293, 295 (C.C.P.A. 1956)) (holding NKJV substantially synonymous with merely descriptive term "New King James Version" and thus merely descriptive of bibles); *In re BetaBatt Inc.*, 89 USPQ2d 1152, 1155 (TTAB 2008) (holding DEC substantially synonymous with merely descriptive term "direct energy conversion" and thus merely descriptive of a type of batteries and battery related services); TMEP §1209.03(h).

A mark consisting of an abbreviation, initialism, or acronym will be considered substantially synonymous with descriptive wording if:

- (1) the applied-for mark is an abbreviation, initialism, or acronym for specific wording;
- (2) the specific wording is merely descriptive of applicant's goods and/or services; and
- (3) a relevant consumer viewing the abbreviation, initialism, or acronym in connection with

applicant's goods and/or services will recognize it as the equivalent of the merely descriptive wording it represents.

TMEP §1209.03(h); see In re Thomas Nelson, Inc., 97 USPQ2d at 1715-16 (citing In re Harco Corp., 220 USPQ 1075, 1076 (TTAB 1984)).

In the present case, the attached evidence shows that applicant's mark "GPT" is an acronym for the wording "generative pre-trained transformer." According to the attached definitions from Merriam-Webster Dictionary, "GENERATIVE" means having the power or function of generating, originating, producing, or reproducing," "PRE-TRAINED" means to "train in advance," and "TRANSFORMER" means "one that transforms." Further, the attached Internet evidence demonstrates such wording is commonly used in applicant's industry to refer to a particular type of software featuring artificial intelligence (AI) that generates responses based on a pool of pre-existing resources that the software uses to generate its responses to user questions. Some examples of such use are:

- "As AI technology advances, the development of **GPT** (**Generative Pretrained Transformer**) models has become increasingly popular. In this article, we will take you through the process of building your own **GPT** project, from planning to deployment." https://www.ideamotive.co/gpt-software
- "We have been using a **GPT** model to explain our insights to operators as a part of BMC HelixGPT, and we have now started to decorate our root-cause insights with ticket resolution-based prescriptions. We constrain our **GPT** with a domain and tenant-specific model that continuously learns resolutions from subject matter experts (SMEs) in the organization—hence the phrase "expert of (your) systems"—and prompt our **GPT** with root-cause analysis we conduct using observational data in prior steps in our AI architecture." https://www.bmc.com/blogs/bmc-helixgpt-expert-of-your-systems/
- "One example of this technology is RoomGPT.io, an AI-powered virtual staging tool. RoomGPT.io uses **GPT** technology, which stands for **Generative Pretrained Transformer**, to generate realistic images of staged rooms. This technology is able to create images that are so realistic that it can be hard to distinguish them from actual photos." https://realestatecareerhq.com/ai-virtual-staging/

Accordingly, the applied-for mark "GPT" will immediately convey to relevant consumers that applicant's software goods and/or services feature AI based software that have the function of generating responses based on a set ofpre-existing data it is trained with in advance, wherein the software transforms inputted information into conversational responses or transforms data into text, images, or other languagesin response to a user question or request.

Considering the above, the applied-for mark is refused registration under Trademark Act Section 2(e)(1). Although applicant's mark has been refused registration, applicant may respond to the refusal(s) by submitting evidence and arguments in support of registration.

Applicant should note the advisory below.

ADVISORY: SUPPLEMENTAL REGISTER

In addition to being merely descriptive, the applied-for mark appears to be generic in connection with the identified goods and/or services. "A generic mark, being the 'ultimate in descriptiveness,' cannot acquire distinctiveness" and thus is not entitled to registration on either the Principal or Supplemental Register under any circumstances. *In re La. Fish Fry Prods., Ltd.*, 797 F.3d 1332, 1336, 116 USPQ2d 1262, 1264 (Fed. Cir. 2015) (quoting *H. Marvin Ginn Corp. v. Int'l Ass'n of Fire Chiefs, Inc.*, 782 F.2d 987, 989, 228 USPQ 528, 530 (Fed. Cir. 1986)); *see* TMEP §\$1209.01(c) *et seq.*, 1209.02(a). Therefore, the trademark examining attorney cannot recommend that applicant amend the application to proceed under Trademark Act Section 2(f) or on the Supplemental Register as possible response options to this refusal. *See* TMEP §1209.01(c).

Applicant should note the additional refusal below.

SPECIMEN NOT ACCEPTABLE

Partial Refusal as to Class 09

Specimen is not an acceptable display for software. Registration is refused because the specimen in International Class 9 is not acceptable as a display associated with downloadable software and does not show the applied-for mark as actually used in commerce. Trademark Act Sections 1 and 45, 15 U.S.C. §§1051, 1127; 37 C.F.R. §§2.34(a)(1)(iv), 2.56(a), (b)(1); TMEP §§904, 904.03(e), (g), 904.07(a). An application based on Trademark Act Section 1(a) must include a specimen showing the applied-for mark as actually used in commerce for each international class of goods identified in the application or amendment to allege use. 15 U.S.C. §1051(a)(1); 37 C.F.R. §§2.34(a)(1)(iv), 2.56(a); TMEP §§904, 904.07(a).

A display specimen for downloadable software (1) must show use of the mark directly associated with the goods and (2) such use must be of a point-of-sale nature. 37 C.F.R. §2.56(b)(1). To show use of a point-of-sale nature, a specimen generally must provide sufficient information to enable the user to download or purchase the software from a website. *See* TMEP §904.03(e) (citing *In re Azteca Sys., Inc.*, 102 USPQ2d 1955, 1957 (TTAB 2012)).

In this case, the specimen does not provide the means to enable the user to download or purchase the software from the website. *See In re Sones*, 590 F.3d 1282, 1286-89, 93 USPQ2d 1118, 1122-24 (Fed. Cir. 2009); *In re Azteca Sys., Inc.*, 102 USPQ2d at 1957; TMEP §904.03(e), (i). Specifically, applicant has provided multiple screenshots of webpages with information describing various software models with non-matching marks such as "GPT-DISCORD-BOT", "GPT-2", and "OPENAI-GPT" with descriptions about how to download these different software models. Applicant also has various webpages showing "GPT" used with an online transformer and descriptions of a GPT software for images and languages. None of these webpages demonstrate the ability to download the identified software with the matching mark "GPT".

Accordingly, such material is mere advertising, which is not acceptable as a specimen for goods. *See In re Yarnell Ice Cream, LLC*, 2019 USPQ2d 265039, at *15-16 (TTAB 2019) (quoting *In re Siny Corp.*, 920 F.3d 1331, 1336, 2019 USPQ2d 127099, at *2-3 (Fed. Cir. 2019)); *see also Avakoff v. S. Pac. Co.*, 765 F.2d 1097, 1098, 226 USPQ 435, 436 (Fed. Cir. 1985); TMEP §904.04(b), (c).

Furthermore, the mark appearing on the specimen and in the drawing must match; that is, the mark in the drawing "must be a substantially exact representation of the mark" on the specimen. See 37 C.F.R.

§2.51(a)-(b); TMEP §807.12(a). Here, the marks on the software associated with the download instructions differs from the applied-for mark because of the extra wording included with the dashes. Applicant has thus failed to provide the required evidence of use of the mark in commerce for Class 09. *See* TMEP §807.12(a).

Examples of specimens. Specimens for downloadable software include instruction manuals or screen printouts from (1) webpages showing (a) the mark associated with the software and (b) ordering or purchasing information or information sufficient to download the software, (2) the actual program while running that shows the mark in the title bar, or (3) launch screens that show the mark in an introductory message box that appears after opening the program. *See* TMEP §904.03(e), (i), (j). Any webpage printout or screenshot submitted as a specimen must include the webpage's URL and the date it was accessed or printed on the specimen itself, within the TEAS form that submits the specimen, or in a verified statement under 37 C.F.R. §2.20 or 28 U.S.C. §1746 in a later-filed response. *See* 37 C.F.R. §2.56(c); TMEP §§904.03(i), 1301.04(a).

Response options. Applicant may respond to this refusal by satisfying one of the following for each applicable international class:

- (1) Submit a different specimen (a verified "substitute" specimen) that (a) was in actual use in commerce at least as early as the filing date of the application or prior to the filing of an amendment to allege use and (b) shows the mark in actual use in commerce for the software identified in the application or amendment to allege use. A "verified substitute specimen" is a specimen that is accompanied by the following statement made in a signed affidavit or supported by a declaration under 37 C.F.R. §2.20: "The substitute (or new, or originally submitted, if appropriate) specimen(s) was/were in use in commerce at least as early as the filing date of the application or prior to the filing of the amendment to allege use." The substitute specimen cannot be accepted without this statement.
- (2) Amend the filing basis to intent to use under Section 1(b) (which includes withdrawing an amendment to allege use, if one was filed), as no specimen is required before publication. This option will later necessitate additional fee(s) and filing requirements, including a specimen.

For an overview of the response options referenced above and instructions on how to satisfy these options using the online Trademark Electronic Application System (TEAS) form, see the Specimen webpage.

RESPONSE GUIDELINES

For this application to proceed, applicant must explicitly address each refusal and/or requirement in this Office action. For a refusal, applicant may provide written arguments and evidence against the refusal, and may have other response options if specified above. For a requirement, applicant should set forth the changes or statements. Please see "Responding to Office Actions" and the informational video "Response to Office Action" for more information and tips on responding.

Please call or email the assigned trademark examining attorney with questions about this Office action.

Trademark Assistance Center

The Trademark Assistance Center (TAC) is the main support center for all customers, from first-time filers to legal professionals and experienced trademark applicants. Contact the Trademark Assistance Center for:

General information about registering a trademark

Trademark literature and publications

Updates on the status of trademark applications and registrations

Answers to case-specific questions about an application or registration

Help navigating electronic forms and systems

Help finding information on our website about the meaning of trademark terms and concepts, how to start the application process, application and registration timelines, and more.

TAC is open from 8:30am to 8:00pm ET:

Toll free: 1-800-786-9199 (press 1) Local: 571-272-9250 (press 0)

International: 1-571-272-9250 (press 0)

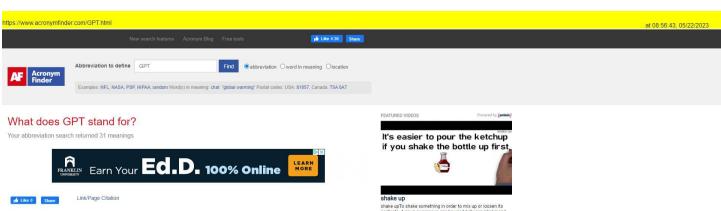

Email: TrademarkAssistanceCenter@uspto.gov

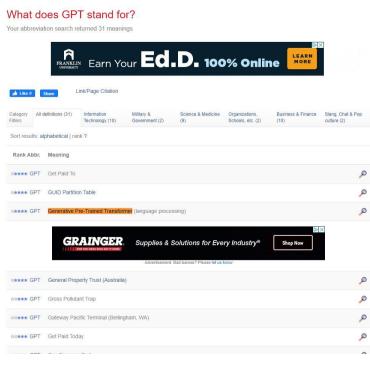

How to respond. File a <u>response form to this nonfinal Office action</u> or file a <u>request form for an extension of time to file a response</u>.

/Kelly Burke/
Kelly Burke
Examining Attorney
LAW OFFICE 128
(571) 272-6205
Kelly.Burke@uspto.gov

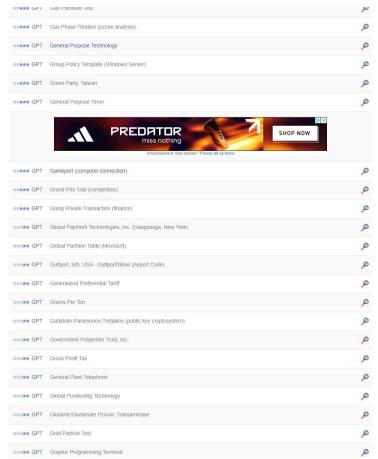

RESPONSE GUIDANCE

- Missing the deadline for responding to this letter will cause the application to <u>abandon</u>. A response or extension request must be received by the USPTO before 11:59 p.m. Eastern Time of the last day of the response deadline. Trademark Electronic Application System (TEAS) <u>system availability</u> could affect an applicant's ability to timely respond. For help resolving technical issues with TEAS, email <u>TEAS@uspto.gov</u>.
- Responses signed by an unauthorized party are not accepted and can cause the application to abandon. If applicant does not have an attorney, the response must be signed by the individual applicant, all joint applicants, or someone with legal authority to bind a juristic applicant. If applicant has an attorney, the response must be signed by the attorney.
- If needed, **find contact information for the supervisor** of the office or unit listed in the signature block.

Syrioriyinis or generative

: having the power or function of generating, originating, producing, or reproducing

Example Sentences

Recent Examples on the Web

Unlike the phone's predictive text feature, ChatGPT is said to be *generative* (the G in GPT).

- Joella Carman, NBC News, 17 May 2023

These stats are really remarkable, especially given how recently *generative* A.I.'s appearance started sounding alarm bells.

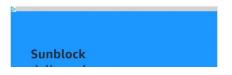

- David Meyer, Fortune, 17 May 2023

But in the generative space, that's just not how this technology works.

- Ryan Faughnder, Los Angeles Times, 16 May 2023

Building a GPT Project: From Planning to Deployment

As Al technology advances, the development of GPT (Generative Pretrained Transformer) models has become increasingly popular. In this article, we will take you through the process of building your own GPT project, from planning to deployment.

Planning the Project Before starting any project, it's important to define your goals and choose the appropriate GPT model for your needs. You'll also need to collect and prepare the dataset you'll use to train the model.

Building the Model Setting up the development environment, installing the necessary libraries and dependencies, and writing the code for the GPT model are all crucial steps in the building process. You'll also need to make sure your code is properly optimized for the GPT model you've chosen.

Training the Model Once your model is built, it's time to start training it. This involves preprocessing your dataset, configuring the training process, and running the training process until your model reaches the desired level of performance.

Evaluating the Model After the training process is complete, it's important to evaluate the model's performance. This involves measuring its accuracy and analyzing the generated language to identify areas for improvement.

Deploying the Model Once you've evaluated and fine-tuned your model, it's time to deploy it. This involves exporting the trained model, setting up the deployment environment, and building an interface for the model so that it can be used in real-world applications.

Clutch ★ ★ ★ ★

Rated 5.0 / 5.0 by clients from various industries and locations.

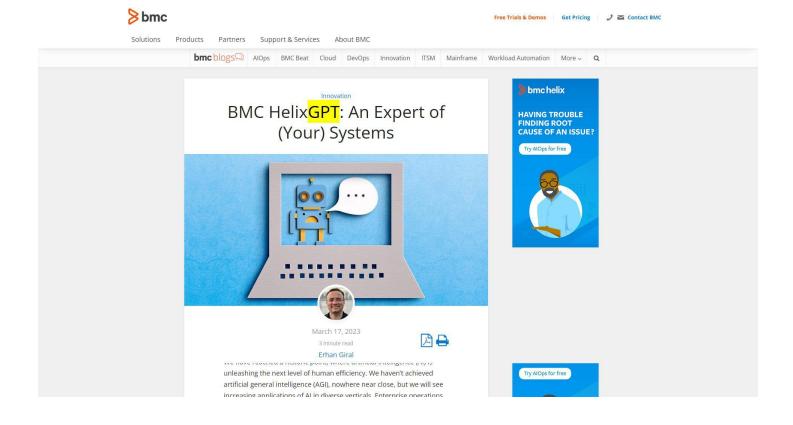

will be one of the first domains that will see significant impact with this

Rapidly declining hardware costs, increasing availability of operational data, and recent modelling breakthroughs are enabling a tectonic transformation for the way enterprises will run their operations. We believe the future of enterprise IT and telecommunication networks will be more data driven, proactive, efficient, and less chaotic, which in turn will enable more innovation.

BMC's application of GPT technology

Our mission here at BMC is to enable efficient digital enterprises. We believe the next level of efficiency in enterprise operations will require near real-time processing of operational data (observational and control plane data from infrastructure, applications, and end users) such that Al can establish an unadulterated view of reality, while ticket, incident, and change data (the activities of humans touching these systems) inform it on how human beings have been responding to issues native to the environment and business.

BMC Helix GPT, the working name for emerging GPT technology, integrates all these traditionally siloed data sources together to derive actionable insights for anomalies and autonomous resolution for mundane issues.

For this purpose, we have architected an Al platform that distills operational data into actionable insights (more on this later). It's a pipeline of Al models that automates L1/L2 (T analyst use cases (anomaly detection, root cause analysis, and mitigation) by eyeballing operational data from IT or telecom services.

We ingest and integrate operational data from all observable layers. We distill anomalous patterns from metrics and logs into events and correlate them with all sorts of other events and change data in the system, with the help of topological data sources. The result of our operational data analysis is neatly packaged insights that we call

Situations. Situations are causally ordered event chains that allow us to do root cause analysis and fingerprinting of repeat issues. They also give us a corpus of event patterns, which we then use to build predictive models around brewing problems. Our data pipeline looks roughly like the following diagram.

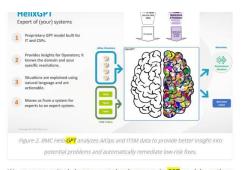

In our observation, telecom networks and sufficiently complex IT services often create tribal support groups around different layers of their architectures. Telecom businesses, for instance, span several related but distinct domains. These domains are vastly different from each other as they cover operational characteristics of facilities and buildings (power, cooling, etc.), transmission networks (aggregate data networks across vast geographies), core IP/WAN (high throughput networking for software definable circuits), network services (dynamic network definitions), and end user services (services rendered/metred for a customer). Operational knowledge about these domains is often recorded in ticket resolutions but gets trapped in different systems, authored by and catering towards different subject matter experts.

We leverage these tribal resolutions by tapping into ticket worklogs. We separate redundant entries from actual resolutions and use these resolutions to train a large neural network that complements a Generative Pretrained Transformer (GPT) model, as shown in the below diagram.

· · · · · ·

We are very excited about recent developments in GPT models, as they have validated our approach to solving full-cycle assurance. We have been using a GPT model to explain our insights to operators as a part of BMC HelixGPT, and we have now started to decorate our root-cause insights with ticket resolution-based prescriptions. We constrain our GPT with a domain and tenant-specific model that continuously learns resolutions from subject matter experts (SMEs) in the organization—hence the phrase "expert of (your) systems"—and prompt our GPT with root-cause analysis we conduct using observational data in prior steps in our AI architecture.

We developed this model to keep the insights provided by BMC Helix human-relatable and, yet, still specific to the enterprise so answers are based on your organization's expertise.

How to Create a Transformer Architecture Model for Natural Language Processing in Visual Studio Magazine.

osted on November 16, 2021 by jamesdmccaffrey

I wrote an article titled "How to Create a Transformer Architecture Model for Natural Language Processing" in the November 2021 edition of the online Microsoft Visual Studio Magazine. See https://visualstudiomagazine.com/articles/2021/11/03/transformer-architecture-model.aspx.

My article explains how to create a transformer architecture model for natural language processing. Specifically, the article shows how to create a model that accepts a sequence of words such as "The man ran through the {blank} door" and then predicts most-likely words to fill in the blank.

print("Ndd %s " % (id, w)) print("\rComputing all 28,996 output possibilities")
blank_id = taker.mesk_token_id # ID of (blank) = 105
blank_id_ids = T.where(inpts("input_ids") -= blank_id)(1) # [6] all_logits = output.logits # [1, 10, 20996] prod_logits = all_logits[0, black_id_ide, :] # [1, 20906]

Transformer architecture (TA) models such as BERT (bidirectional encoder representations from transformers) and GPT (generative pretrained transformer) have revolutionized natural language processing (NLP). But TA systems are extremely complex, and implementing them from scratch can take hundreds or thousands of man-hours. The Hugging Face (HF) library is open source code that has pretrained TA models and an API set for working with the models. The HF library makes implementing NLP systems using TA models much less difficult.

The demo program begins by loading a pretrained DistilBERT language model into memory. DistilBERT is a condensed version of the huge BERT language model. The source sentence is passed to a Tokenizer object which breaks the sentence into words/tokens and assigns an integer ID to each token. For example, one of the tokens is "man" and its ID is 1299, and the token that represents the blank-word is [MASK] and its ID is 103.

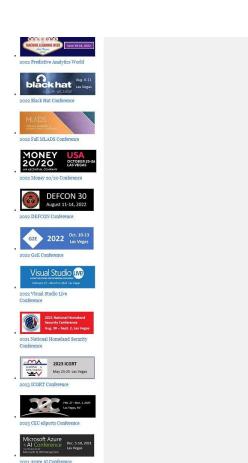

The token IDs are passed to the DistilBERT model and the model computes the likelihoods of 28,006 possible words/tokens to fill in the blank. The top five candidates to fill in the blank for "The man ran through the {blank} door" are: "front," "bathroom," "kitchen," "back" and "garage."

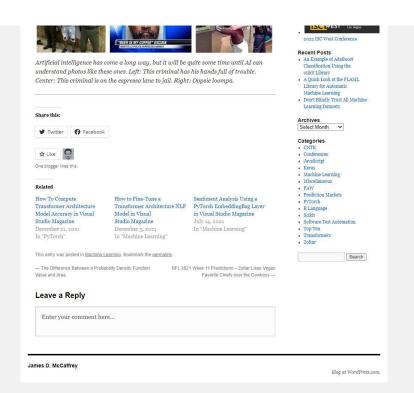

One way to think about the fill-in-the-blank example presented in this article is that the $\,$ DistilBERT model gives you an English language expert. You can ask this expert things such as what is the missing word in a sentence, or how similar two words are. But the DistilBERT expert doesn't have specific knowledge about anything beyond pure English. For example, the basic DistilBERT model doesn't know anything about movies. It is possible to start with a basic DistilBERT model and then fine-tune the model to give it knowledge about movie reviews in order to create a movie review expert. The fine-tuned expert will know about English and also about the difference between a good movie review and a bad review.

Al Virtual Staging an Entire House in Under 10 Minutes

(**) Disclosure: This post may contain affiliate links, meaning our company, JCHQ Publishing will get a commission if you decide to make a purchase through the links, but at no additional cost to you.

Are you a real estate agent looking to improve your property listings? If so, you may want to consider virtual staging. Virtual staging involves the use of advanced photo editing software to add furniture and decor to images of a property, creating a more inviting and livable space for potential buyers.

For example, a real estate agent in New York City could use virtual staging to transform a small and outdated apartment into a stylish and modern space that would appeal to young professionals. Another agent in Los Angeles used virtual staging to create a beachy and relaxed vibe in a vacant property near the ocean.

 $\underline{\textit{Virtual staging}}\ can \ help\ to\ highlight\ the\ property's\ location\ and\ create\ an\ emotional\ connection\ with\ potential\ buyers.$

While virtual staging has been around for years, recent advances in AI technology have made the process faster and more accurate than ever before. In fact, I just tested an AI virtual staging platform where agents can now stage an entire home in just $10\,\mathrm{minutes}$.

In this article, we'll explore how AI technology can save you time and money while making your listings stand out. Plus, you'll get an inside look at how I recently tried and tested this game-changing technology.

This is the Al Virtual Staging Platform I tried

One example of this technology is <u>Room GPT io</u>, an Al-powered virtual staging tool. Room <u>GPT io</u> uses <u>GPT</u> technology, which stands for Generative Pretrained Transformer, to generate realistic images of staged rooms. This technology is able to create images that are so realistic that it can be hard to distinguish them from actual photos.

Using Room GPTio is incredibly easy. All a user needs to do is upload a photo of a room, and the AI system takes care of the rest. You may select different styles such as modern, minimalist, vintage, professional, or even tropical.

Within just a few seconds, Room GPT to generates an image of the room with furniture and decor, making

ABOUT US

RealEstateCareerHQ.com is a resource center for those who wish to explore the real estate career in United States. It is a website owned and managed by JCHQ Publishing.

Whether you are a youngster who is about to enter the workforce, someone who is looking for a second career, or an existing real estate professional who desires to advance your career into the next level, our mission is to make your life easier by providing you with valuable resources about the real estate industry.

@ ezoic

report this ad

However, one downside I found is this platform only allows limited number of photo uploads for every 24 hours. I hope they will eventually wave this limit, or at least, have a paid version that can bypass this restrictions.

How to Get Started with AI Virtual Staging

If you're a real estate agent interested in trying AI virtual staging for your property listings, there are a few things to keep in mind. First, it's important to choose the right virtual staging provider. Look for a provider that uses advanced AI technology and has experience working with real estate agents.

It's also important to provide high-quality images of the property to ensure the best results.

When taking photos for AI virtual staging, it's best to take them at a straight-on angle and at a height that represents a person's natural viewpoint. This will allow the virtual staging software to accurately position furniture and decor in the room, creating a more realistic and appealing image for potential buyers.

Finally, make sure to work closely with the virtual staging provider to ensure that the virtual staging accurately represents the property and appeals to potential buyers.

\$ 34.99

Here 's another post with on how to take beautiful real estate photos. In there, you'll find helpful tips from a professional real estate photographers,

The Advantages of Al Virtual Staging

One of the main advantages of AI virtual staging is speed. Traditional virtual staging can take hours or even days to complete, depending on the complexity of the project. However, with AI virtual staging, an entire home can be staged in just minutes.

This means that real estate agents can get their property listings up and running much faster, which can lead to faster sales and increased revenue.

Another advantage of AI virtual staging is accuracy. AI technology can analyze the images of the property and determine the best furniture and decor to use based on factors like room size, lighting, and style. It creates a sense of flow and make the space look more inviting and livable.

This can result in more realistic and appealing virtual staging images that are more likely to attract potential buyers.

Examples of Al Virtual Staging in Action

There are many examples of real estate agents who could use AI virtual staging to improve their property listings. Imagine an agent, John, who was struggling to sell a large, empty house in a rural area. After trying traditional virtual staging with little success, he decided to give AI virtual staging a try.

Using an AI virtual staging provider, John could stage the entire house in just 10 minutes. The virtual staging images were so realistic that potential buyers could envision themselves living in the space, and the house could potentially sell within a week of the new listing going live.

Another real estate agent, Sarah, could use AI virtual staging to transform a small, outdated apartment in the city, AI technology could determine the best furniture and decor to use to make the space look larger and more modern.

The resulting virtual staging images could be so effective that the apartment could sell within a month, despite being on the market for over a year with no offers prior to the virtual staging.

As a real estate agent, you could experience similar success by incorporating AI virtual staging into your marketing strategy.

Conclusion

In conclusion, AI-powered virtual staging has transformed the real estate industry by making the virtual staging process faster, more cost-effective, and more convenient. The use of machine learning algorithms to analyze the image of a room and add the most suitable furniture and decor has made virtual staging more realistic than ever before, allowing potential buyers to visualize themselves in the space.

With virtual staging, real estate agents can save time and money, and they can stage properties remotely without physical presence. It is fascinating to think about what other innovative solutions the industry will witness with the continuous advancement of technology.

United States Patent and Trademark Office (USPTO)

USPTO OFFICIAL NOTICE

Office Action (Official Letter) has issued on May 25, 2023 for U.S. Trademark Application Serial No. 97733259

A USPTO examining attorney has reviewed your trademark application and issued an Office action. You must respond to this Office action to avoid your application abandoning. Follow the steps below.

- (1) **Read the Office action**. This email is NOT the Office action.
- (2) **Respond to the Office action by the deadline** using the Trademark Electronic Application System (TEAS). Your response, or extension request, must be received by the USPTO on or before 11:59 p.m. **Eastern Time** of the last day of the response deadline. Otherwise, your application will be <u>abandoned</u>. See the Office action itself regarding how to respond.
- (3) **Direct general questions** about using USPTO electronic forms, the USPTO <u>website</u>, the application process, the status of your application, and whether there are outstanding deadlines to the <u>Trademark Assistance Center (TAC)</u>.

After reading the Office action, address any question(s) regarding the specific content to the USPTO examining attorney identified in the Office action.

GENERAL GUIDANCE

- <u>Check the status</u> of your application periodically in the <u>Trademark Status & Document Retrieval (TSDR)</u> database to avoid missing critical deadlines.
- <u>Update your correspondence email address</u> to ensure you receive important USPTO notices about your application.
- Beware of trademark-related scams. Protect yourself from people and companies that
 may try to take financial advantage of you. Private companies may call you and pretend
 to be the USPTO or may send you communications that resemble official USPTO
 documents to trick you. We will never request your credit card number or social security
 number over the phone. Verify the correspondence originated from us by using your
 serial number in our database, TSDR, to confirm that it appears under the "Documents"
 tab, or contact the Trademark Assistance Center.
- Hiring a U.S.-licensed attorney. If you do not have an attorney and are not required to

have one under the trademark rules, we encourage you to hire a U.S.-licensed attorney specializing in trademark law to help guide you through the registration process. The USPTO examining attorney is not your attorney and cannot give you legal advice, but rather works for and represents the USPTO in trademark matters.
